### DETAILED ACTION

1. Claims 4-9 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 5.
2. Claims 1-2 are rejected under 35 U.S.C. 102(b) as anticipated by May (#5,893,645) or, in the alternative, under 35 U.S.C. 103(a) as obvious over May. May shows the method of advancing a carrier film with a top and bottom film 12, 14 wherein the top film is heat fused to base strip 18 and the bottom film 14 is heat fused to base strip 16 at preselected locations (col 6 lines 30+). The examiner reads the advancing the web limitation on fusing the strips at preselected locations. The examiner infers that the web is advancing to these preselected locations. Furthermore, examiner notes that it is well known in the art to advance webs and attach discrete members to the webs.

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over May in view of Hamm (#6,411,987). May discloses that the zipper profiles are heat fused at preselected locations but does not disclose that the profiles are attached

simultaneously. Hamm shows the concept of fusing discrete zipper profiles simultaneously to their respective webs as shown in figure 3.2. It would have been obvious to <sup>4 2</sup>one of ordinary skill in the art at the time of the invention to provide May with simultaneously attaching the profiles as taught by Hamm to expedite the manufacturing process.

### ***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Bois shows attaching profile members to advancing webs.
